Alternative Petroleum Technologies Commissions First Emulsified Biodiesel Fuel Blending Unit in California

Comtex

LUXEMBOURG, June 1, 2010 /PRNewswire via COMTEX/ ----Alternative Petroleum Technologies S.A. (APT) announced today that it has completed the commissioning of an emulsified biodiesel fuel blending unit near Sacramento, CA. The blending unit has a 14 million liters-per-year capacity and will initially be utilized to support the APT agreement with the Port of Los Angeles. Once the Port of Los Angeles program is running on a continuous basis, APT will proceed to market emulsified biodiesel fuel in California's larger cities along the major state roadways.

Dr. Thomas Houlihan, a senior engineer at APT, stated, "Since I was first introduced to emulsified fuel technology during my tour at the White House Science Office, I have recognized the technology as a realistic method for cost-effective reduction of harmful emissions from diesel engines. Emulsified biodiesel fuel provides an enviable reduction in carbon dioxide, oxides of nitrogen and particulate matter emissions with no need for modifications to old or newer diesel engine fuel systems."

About Alternative Petroleum Technologies (www.altpetrol.com)

Alternative Petroleum Technologies S.A. is the holding company for a group of environmental technology companies dedicated to all aspects of cost-effective solutions to environmental problems. We offer technologies and expertise to help operators of compression-ignition engines and industrial boilers meet increasingly stringent emissions requirements. We are developing new ways to help international power plant operators meet the constantly growing demand for electricity with heavier oil products that are made cleaner and more economical. And we are meeting the challenge of providing even cleaner biodiesel fuels with new generations of emulsified fuels.
